A Polyphonic Modulation Device

Move complex rhythmic patterns from one instrument to another in seconds

Ever loop a MIDI sequence while switching between presets? MPE Envelope lets you do the same thing, but with modulation patterns and MPE presets. Synchronize polyphonic modulations across instrument layers and move beyond internal modulator limitations in pursuit of your sonic vision.

Transform your patterns algorithmically

Use Transform Buttons to build complex sequences that would be extremely time consuming to produce using Ableton's Shaper devices.

An enhanced version of Shaper's click-to-map system encourages deeper experimentation with less risk

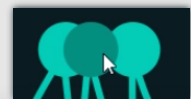

- Parameter mapping toggles let you make A/B comparisons without having to unmap and remap
- Parameters always revert to their pre-mapped values when unmapped, ensuring safe exploration
- Advanced mapping options let you tailor modulation shapes and retrigger settings to match each parameter's unique characteristics

A better breakpoint editor: Less hassle, more control

Quantize MIDI notes to an adjustable Swung Grid

We designed Swing to be straight-forward and intuitive. Its simplicity makes it a great starting point for learning to program MIDI Tools. We enthusiastically support our users in exploring and understanding our designs. We document our devices comprehensively to inspire learning and spark creativity among our community.
